Altronix Features Innovative Power and Enhanced Networking Solutions at Intersec Dubai

Dubai (12 January 2026) – Altronix, a global leader in power and networking solutions, is showcasing its cutting-edge lineup of power and networking solutions during Intersec Dubai at Stand S2-D20.

"Intersec Dubai is the ideal stage to debut our latest advancements in power and networking, including the new eFlow Pro Series offering robust power, auto-ranging input, along with LiFePO4 battery charging. This provides unparalleled flexibility for international projects," said Alan Forman, President, Altronix. "We continue to innovate with the goal of reducing installation complexity and providing smarter, more resilient solutions that support the evolving needs of the global security community."

Altronix will highlight the following innovations at its booth:

Trove™ Access & Power Integration Solutions
Trove delivers an all-in-one solution by combining Altronix power and accessories with leading access control brands in scalable wall or rack-mount configurations. It's compatible with more than 50 leading manufacturers including AMAG, AXIS, Brivo, Galaxy, and all Mercury platform brands. Trove is available in pre-wired and pre-configured kits that simplify installation, streamline wire management, and provide a single point of service and maintenance.

eFlow™ Pro Series Auto-Ranging Power Supply/Chargers
The new eFlow Pro sets new benchmarks in versatility for physical security system installations globally. The new universal auto-ranging power supply accommodates any application globally with input from 90VAC to 256VAC sources to provide power 12VDC or 24VDC up to 14A – with a separate charging circuit for SLA or LiFePO4 batteries.

NetWay™ Spectrum Hardened PoE Solutions and Rapid Battery Charger
Supports up to 90W per port, combining fiber and power delivery for remote or edge applications. When paired with the EBC48 rapid battery charger, 32AH batteries recover in under eight hours to ensure system uptime. Plus the new 277VAC input options provide the versatility required for demanding industrial and outdoor sites.

Pace™ Long-Range Ethernet Solutions
Pace extends Ethernet connectivity up to 1000m utilizing single pair infrastructure – or up to 500m over structured cabling for added flexibility. It supports cost-effective network expansion using existing infrastructure with T1L industrial devices such as sensors and controllers.

Circ™ Continuous Power Solutions
This solution provides redundant power in the event of a power failure. Using seamless transfer between two independent 115VAC or 230VAC inputs, it ensures uptime for mission-critical systems.

LINQ™ Network Communication: Now Integrated with Milestone
Now integrated with Milestone XProtect VMS, LINQ enables users to view device and power status directly within the XProtect Smart Client. It expands visibility of connectivity, voltage thresholds, service alerts, and battery status to improve overall system management.

Altronix products are all backed by a lifetime warranty and its industry-leading technical support team.
