

**FOR IMMEDIATE RELEASE**

## **Altronix Advanced Dual Voltage Modules Offer More Outputs**

*Compact Boards Increase System Capacity and Conserve Valuable Space*

**Brooklyn, NY** (July 27, 2022) – [Altronix](#), the recognized leader in power and data transmission solutions for the professional security industry, announces the availability of the new ACMS12 and ACMS12CB Access Power Controllers and PDS16 and PDS16CB Power Distribution Modules. These new sub-assemblies further increase access control system capacity in Altronix Trove Access and Power Integration Solutions, and any other wall or rack mount solution - reducing overall equipment and installation costs.

“Our new sub-assemblies deliver up to twice the outputs and feature the same stackable mounting footprint, often used with our VR6 and Tango1B,” said Ronnie Pennington, Director of Sales for the Americas, Altronix. “More outputs in less space also means more room for controllers inside an enclosure. This allows installers to easily configure and scale new and existing systems, especially when pre-configured inside an Altronix Trove kit.”

The **ACMS12** series features dual inputs allowing power to be steered from two independent low voltage 5 to 24VDC power sources into twelve (12) independently controlled fuse or PTC protected outputs. These access power controllers accommodate a variety of devices including mag locks, electric strikes, magnetic door holders, and more. An FACP interface enables emergency egress, and alarm monitoring, or may be used to trigger other auxiliary devices with fire alarm disconnect individually selectable for any or all of the twelve outputs. Spade connectors allow installers to daisy chain power to multiple sub-assembly modules to distribute power over more outputs for larger systems.

The **PDS16** series features dual inputs designed to steer power from either two low voltage AC or DC power sources. Power is distributed over a total of sixteen fuse or PTC-protected outputs with spade connectors that allow installers to daisy chain to multiple sub-assembly modules to distribute power over more outputs for larger systems.

Altronix products are NDAA and TAA compliant and backed by a lifetime warranty.

### **About Altronix**

Altronix Corporation is the leading designer and manufacturer of quality low voltage electronics for the video surveillance, security, fire, access control and automation markets that deliver "More than just power". Altronix corporate is located in Brooklyn, NY, U.S.A. occupying approximately 200,000 square feet with the latest manufacturing technologies providing the highest levels of quality and reliability. Altronix is an ISO 9001 registered firm. Altronix products are TAA and NDAA compliant and carry a lifetime warranty.
