**Altronix Showcases Enhanced Power and Data Transmission
Versatility at ISC East**

Delivers More Power, Distance, Flexibility and Scalability Over Various Infrastructure

New York, NY (November 17, 2021) – [Altronix](#), is featuring their latest products which provide system designers and installers with higher levels of versatility to increase situational awareness and better futureproof installations here at ISC East in booth #936. These new products enable more edge devices to be deployed at longer distances, and with more power to accommodate a greater range of specialized surveillance and security applications.

“We are pleased to be back exhibiting at ISC East, showcasing some of our latest power and data transmission solutions, and to re-engage with our security colleagues in attendance,” said Alan Forman, President, Altronix Corporation. “As the industry continues to struggle with myriad challenges, rest assured knowing that Altronix is stronger than ever and maintaining our highest level of customer support.”

Altronix is turning up the power with an enhanced line of NetWay products designed to accommodate 802.3bt PoE cameras, illuminators, locking devices, LED lighting and

more. New IEEE 802.3bt compliant midspans and hardened PoE switches provide up to 90W per port, accommodating both fiber or structured cable. Models are available in a variety of single and multi-port configurations for indoor or outdoor applications.

Adding greater value to your system, new NetWay series adapters enable two devices over a single structured cable. NetWay3012P provides PoE+ (30W) and 12VDC simultaneously, while NetWay2ES provides 2-PoE+ ports (60W) to power IP cameras, external microphones, IR illuminators and more, reducing installation time and costs.

For specialized hard to reach installations, Altronix PACE1KRT Single Pair Ethernet Adapter Kit transmits power and data over twisted pair at distances up to 1000m. This solution is ideal when deploying networked surveillance and security devices at longer distances, such as elevators and other remote industrial applications.

Altronix has also expanded their line of fire power solutions with the release of new rack mount NAC Power Extenders which increase fire signaling capacity while occupying less space, where wall space is limited or not an option.

Altronix products are NDAA and TAA compliant and carry a lifetime warranty.
