**Altronix Innovative Tango™ PoE Driven Power Supply/Chargers
Are Now UL Listed for Access Control**

Brooklyn, NY (February 25, 2021) – [Altronix](https://www.altronix.com), the recognized leader in power and data transmission solutions for the professional security industry, announces that its award-winning Tango™ PoE Driven Power Supply/Chargers are now UL 294 for access control applications. This reaffirms the high quality and performance of Tango solutions that end users, architects, and security consultants demand for mission critical access control applications.

Tango leverages low-voltage installation methods, eliminating the need for an electrician and dedicated conduit and wire runs. This unique solution delivers 12VDC and 24VDC simultaneously from any 802.3bt PoE source up to 90W such as Altronix NetWay injectors. When combined with Altronix stackable sub-assemblies, Tango can

support up to 8 locking devices with power for controllers and ancillary devices. A single Lithium Iron Phosphate battery (LiFePO4) provides backup for 12VDC and/or 24VDC systems, adding to the systems ROI.

“Tango provides system designers and installers with a cost-effective and efficient means to power access control and security devices by employing the latest PoE technology,” said Ronnie Pennington, National Sales Engineer, Altronix Corporation. “Now UL 294 listed for access control, Tango is documented to operate with the highest levels of reliability and safety providing a plug-and-play option for deploying access control systems.”

The Tango Series is available in myriad configurations to meet a wide variety of system applications. All models are equipped with LiFePO4 (Lithium Iron Phosphate) battery backup. Tango solutions are flexible to accommodate Altronix sub-assemblies including: Altronix PDS8 Dual Input Power Distribution Modules which distribute 12VDC and/or 24VDC over a total of eight (8) fuse or PTC protected selectable outputs; and Altronix ACMS8 Dual Input Access Power Controllers which distribute power over a total of eight (8) fuse or PTC protected Fail-Safe and/or Fail-Secured relayed outputs. As well as network versions of these boards with embedded remote power management.

Altronix products are manufactured in the U.S.A. and backed by a lifetime warranty.
